

## ONECLOUD TESTING

We cooperate with our Finnish partner Tieto in the form of nearshore outsourcing on OneCloud service. The largest Northern European IT company has contacted us as a trusted partner on the basis of the positive experience they had with our services in the past.

### WHAT WAS THE ISSUE?

Progress in information technology indicates a gradual transition from locally-secured IT services to Cloud services. The issue with which Tieto contacted us was primarily the need for a greater degree of automated OneCloud product-testing. Due to the situation on the local labour market, the company was unable to secure these activities in terms of capacity and therefore took advantage of the possibility of outsourcing them

to a responsible partner outside its home region.

Our cooperation has only just begun, but the results are already visible after a short period of time. We found that the development of the product Tieto was engaged in was too agile, the set form of manual testing was lengthy, and it was ultimately inadequate for the overall efficiency of product development.

### WHAT ARE THE RESULTS OF OUR COOPERATION?

In QBSW, we have found space to improve processes in regression testing. Its weak coverage has led to difficulties that have delayed the entire development process.

In case of such a complex type of product as OneCloud service, it is natural that a number of faults and errors occur - our task is to eliminate these errors and provide Tieto with a way to fully automate the tests to make the processes run faultlessly. Currently, we are jointly proposing and developing a strategy of how to proceed in the next testing.

The testing system we designed for Tieto in

QBSW works with a complicated infrastructure in which a number of Cloud systems on different platforms need to be integrated into a single working Cloud system.

Moreover, the cost of work is lower in the Central European region, and cooperation with the QBSW has brought the client a significant cost saving for project implementation.

As it is a demanding service in terms of time, quality and finance, it is ideal for Tieto to be able to rely on nearshore outsourcing services from QBSW.
